

Manager Dialog Disappears

When you open the Manager Dialog (wac_md.exe), sometimes it does not appear on the screen but you can see that it opened because of the icon down on the taskbar.

There is a workaround for this:

- Close the manager dialog.
- Open c:\Clarinet\Clatools – Sort by “date modified”.
- Erase the "wac_1d.aci" file.
- Close the window.

Click on the Zumara icon, the manager dialog appears again.

It will now work correctly.
